Geography GCE A Level 2023 - Paper 1

Duration: 1h30 | Cameroon GCE Board

GENERAL CERTIFICATE OF EDUCATION BOARD, General Certificate of Education Examination. 0750 Geography 1, JUNE 2023, ADVANCED LEVEL. Multiple choice question paper, one hour 30 minutes. Mobile phones are NOT allowed in the examination room. Instructions to candidates: use a soft HB pencil throughout the examination; do not open the booklet until told to do so; check that the booklet is headed 'Advanced Level - 0750 Geography 1'; fill in the information required on the answer sheet (Candidate Name, Exam Session, Subject Code and Candidate Identification Number). Answer ALL the 50 questions in this examination; all questions carry equal marks. Calculators are allowed. Each question has FOUR suggested answers: A, B, C and D. Decide which answer is correct, find the number of the question on the answer sheet and draw a horizontal line across the letter to join the square brackets for the answer you have chosen. Mark only one answer for each question: if you mark more than one answer you will score a zero for that question. Avoid spending too much time on any one question; you can come back to it later. Do all rough work in the booklet, using the blank spaces. At the end of the examination the invigilator collects the answer sheet first and then the question booklet. The paper has two sections: Section A, Physical Geography (questions 1 to 25), and Section B, Human Geography (questions 26 to 50).

---

1. The layers of the atmosphere in sequence from the earth's surface upwards are:

a) Stratosphere, mesosphere, troposphere, thermosphere
b) Troposphere, mesosphere, thermosphere, stratosphere
c) Troposphere, stratosphere, mesosphere, thermosphere
d) Thermosphere, stratosphere, troposphere, mesosphere

2. Isolate the non-solar energy depletion process in the atmosphere from the following list:

a) Absorption
b) Reflection
c) Condensation
d) Scattering

3. Which of the condensation product is associated with a convective precipitation?

a) Altocumulus clouds
b) Stratocumulus clouds
c) Convectional rainfall
d) Cumulonimbus clouds

4. A relationship of high annual temperature and low annual precipitation is exhibited in which of the following climatic regions in Cameroon?

a) Guinean climate
b) The Cameroon type climate

c) Dry Tropical climate
d) The Cameroon maritime climate

5. The Cameroon type of climate prevailing in parts of the Coastal Lowlands and Western Highlands with very high annual rainfall amounts (2000mm - 4000mm) is respectively influenced by any one of the following combination of factors.

Options as printed: A) Relief and convection B) Relief and Monsoon winds C) Monsoon winds and Relief D) Monsoon winds and convection

6. Figure 1 below is a graph, showing conditions of annual soil moisture budget for a tropical region.

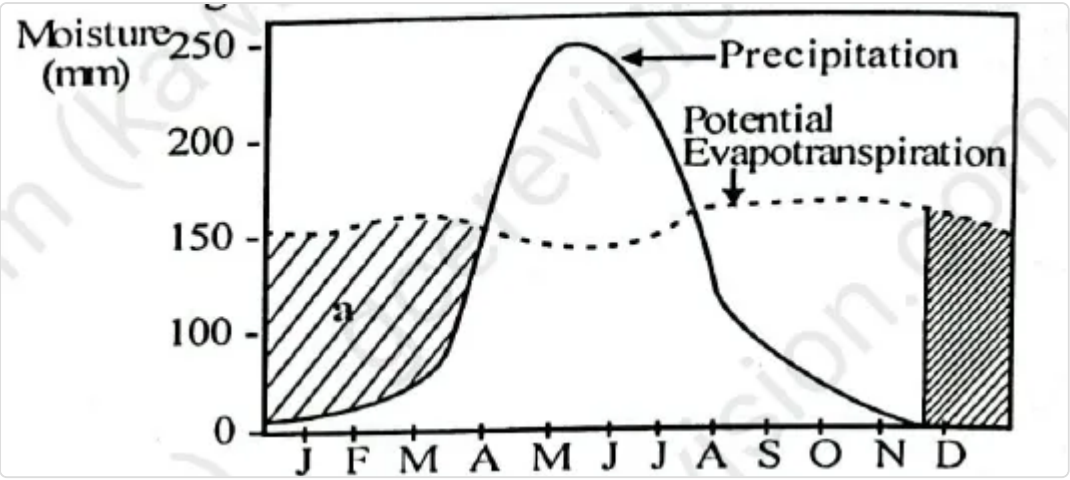

Figure 1: Soil moisture conditions (moisture in mm against months J to D, with the precipitation curve and the potential evapotranspiration curve). Source: Adapted from Nchangvi S.K (2008) P. 133.

Identify the soil moisture conditions at (a).

a) Soil moisture deficit
b) Soil moisture surplus
c) Soil moisture recharge
d) Soil moisture utilization

7. The major rivers that drain into Lake Chad drainage basin are:

a) R. Lagone and R. Benue
b) R.Faro and Chari
c) R. Sangha and Benue
d) R. Chari and Logone.

8. What are the key aspects of the river basin that are affected by human activities?

a) Urbanization especially the paved surfaces, roofs and drains
b) Agriculture especially irrigation, rice and sugar cane cultivation
c) Runoff, water discharge and load transport
d) Deforestation especially of the river catchment and the surrounding forests

9. The Mantle is different from the Crust because it is a constitution of:

a) Rocks in semi-solid state of silicate minerals and generate heat.
b) Granitic and Metamorphic rocks rich in silica and aluminium.

c) Basaltic rocks rich in silica and magnesium.
d) Rocks in liquid state of Nickel and Iron in very high temperature.

10. Which of the following characteristics best suits plate margins of divergence?

a) Tear faults violent volcanic eruptions and basic lava
b) Quiet volcanic eruptions, deep focus earth quakes and acidic lava
c) Shallow focus earth quakes violent volcanic eruptions and compressional faults
d) Basic lava, quiet volcanic eruptions shallow focus earthquake

11. In the occurrence of volcanism, only one of the processes represent all the activities involved.

a) Magma reaches the earth's surface as lava before cooling and solidifying.
b) Magma is injected into the crust or ejected onto the surface.
c) Volcanoes are formed from molten rocks injected into the crust
d) Magma flows from an epicenter to form volcanoes.

12. Which one of the following crater lakes is not located along the Cameroon Volcanic Line?

a) Twin Manenguba lakes
b) Lake Barombi
c) Lake Oku
d) Lake Ossa

13. Which of the following represents processes of chemical weathering?

a) Thermal expansion and contraction
b) Mass exfoliation and thermal shattering
c) Hydration and hydrolysis
d) Frost action and crystal growth

14. A greater part of a river's load is transported through which of the following mechanisms?

a) Suspension
b) Solution
c) Traction
d) Saltation

15. Which are the main inputs in a coastal system?

a) Energy, sediments, shells of dead sea animals
b) Wave action, transportation, beach materials
c) Energy, beach materials, erosion
d) Sediments, wave action, beach materials

16. The constituents of soil are: mineral matter, organic matter, air and water. In a soil profile which one of the above soil constituents makes up a greater portion of the soil?

a) Organic matter
b) Mineral matter
c) Air
d) Water

17. The physical and chemical characteristics of the soil are determined by one of soil forming factors.

a) Parent material
b) Biological activity
c) Climate
d) Time.

18. Isolate the pedogenic regime associated with areas characterized by mean annual temperature of about 28°C and annual rainfall of more than 1500mm.

a) Calcification
b) Ferrallisation
c) Salinization
d) Gleization

19. Choose the soil types that are found on the Western Highlands of Cameroon from the following:

Options as printed: A) Ferrugenous, volcanic, alluvial B) Scree, alluvial, volcanic C) Podzol, latosol, volcanic D) Meadow, volcanic, latosol

20. Nutrient cycling here is characterised by a fairly small biomass store, smaller litter store, while the soil store is by far the largest. Nutrient transfer is greater from biomass to litter, followed by litter to soil. The transfer from soil to biomass is the least. The above relates to which of the following

a) Coniferous forest ecosystems
b) Tropical Rain forest
c) Tropical grasslands
d) Temperate grasslands

21. Plant succession takes a long time to evolve and follow stages. Select the correct sequence from the following:

Options as printed: A) Pioneer, invasion, adaptation, climax B) Colonization, invasion, competition, dominance C) Pioneer, invasion, elimination, migration D) Colonization, migration, adaptation, glaciation

22. A vegetation with a great diversity of plant species relate to which of these types in Cameroon?

a) Guinea savanna
b) Tropical rainforest
c) Sahel savanna
d) Sudan savanna

23. Which of these measures can be used to combat drought?

a) Tree planting, reduced grazing, alternative energy, water conservation
b) Cloud seeding, overgrazing, overhunting, tree planting
c) Irrigation, dam construction, deforestation, over cultivation
d) Tree planting, deforestation, pollution, over cultivation

24. Identify the agent of pollution responsible for the leaching of important soil nutrients like calcium and potassium and killing fish.

a) Solid waste
b) Acid rain

c) Oil spillage
d) Nitrogenous waste.

25. Invisible drought occurs when:

a) In the humid and sub-humid areas, the rain falls over a period of time
b) The dry season is extended in areas of distinct wet and dry seasons.
c) In the arid areas, no season has precipitation to satisfy the water needs of plants
d) The daily supply of soil moisture fails to equal the daily water needs of plants

26. Figure 2 illustrates the relationship between population density and altitude.

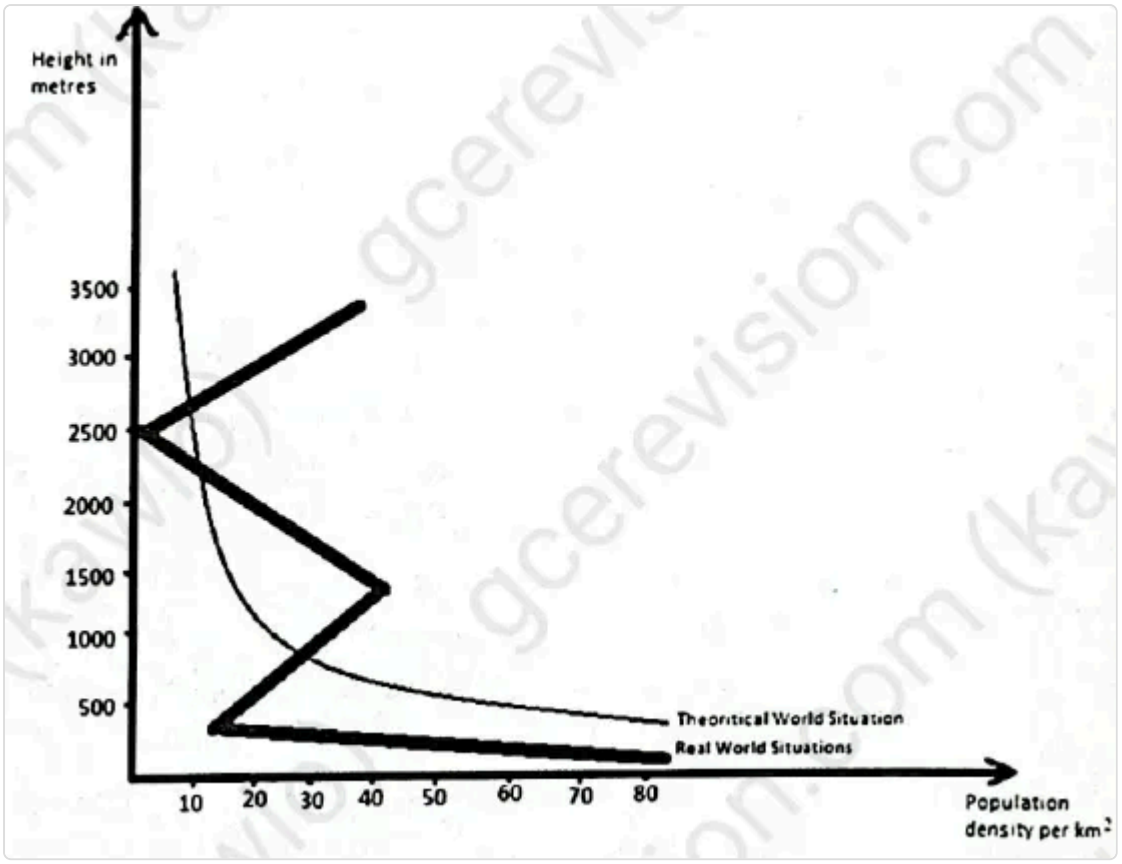

Fig 2: The relationship between population density and Altitude (height in metres against population density per km², with a thin curve for the theoretical world situation and a thick line for real world situations).

What is the reason that best explains the increase in population density between 500m and 1250m?

a) Such regions are in low latitude areas where low altitude is too hot for human habitation.
b) Such regions are in high latitude areas where low altitude are too cool for human habitation
c) Such areas are in dry desert environments where low altitudes are too hot for human habitation.
d) Such areas are in the mid-latitudes where the snow covers low altitude areas

27. Study the population data in Table 1 for countries L, M, N and O.

Table 1: Population data in millions

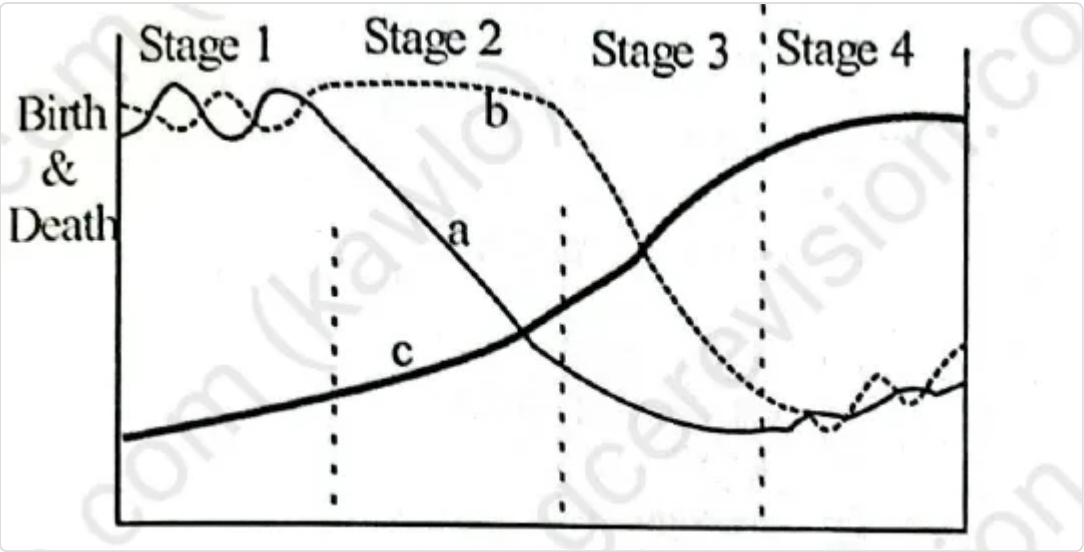

Country	Youth	Adults	Aged
L	13	31	17
M	19.5	32	14

Country	Youth	Adults	Aged
N	16	29	14
O	15	20	10

Which of the countries L, M, N, and O has the highest dependency ratio?

a) N
b) M
c) O
d) L

28. Figure 3 below shows the Demographic Transition Model. On the figure, line b represents?

Source: Adapted from Nagle G. & Spencer K. (2001), p. 97.

a) Natural Increase
b) Birth rate
c) Total population
d) Death rate.

29. Study the population data for countries H, I, J and K in the table below and answer question 29.

Country	Total population in million	Death in million	Births in millions	Pop growth rate in %
H	20	5	2	2.8%
I	15	3	1.8	3.1%
J	25	4.5	2.1	1.5%
K	18	3.5	2.2	2.0%

Using the law of 70 (average life expectancy), which of the countries labeled H, I, J, and K has the lowest doubling time?

a) K
b) J

c) H
d) I

30. *"The volume of migration is inversely proportional to the distance travelled by migrants"* This law is often attributed to who?

Options as printed: A) E.G. Ravenstein B) Everett Lee C) Hornby and Jones D) G.K. Zipf

31. Increase population necessitates increase production of food. This describes:

a) The Malthusian Theory
b) The exponential growth model
c) The Boserup's model
d) The Gravity model

32. *"The population problem is not caused by the rapid growth rate of population but rather by the mal-distribution of resources."* This view is strongly supported by

a) Thomas Malthus
b) Karl Marx
c) Esther Boserup
d) Alfred Weber

33. The following constitutes the characteristics of a given type of agricultural system;

- Limited inputs, reliance on the natural fertility of the soil and requires very extensive areas;
- there is mixed cropping and is practiced in areas of very low population densities.

These characteristics refer to which of the following farming systems?

a) Shifting cultivation
b) Bush fallowing
c) Subsistence farming
d) Peasant farming

34. Calculate the economic rent using the formula ER/LR = Y(m-c-td) for a particular crop cultivated on a piece of land, the yield (Y) is 115 tonnes per unit of land, with the market price (m) of 1375 francs per tonne, production cost (c) is 195 francs per tonne, transport cost (t) per km is 100 francs per tonne and the distance (d) is 25km.

Options as printed: A) 108,125 B) 106,950 C) 125,000 D) 209,000

35. Which are the handicaps to industrialization in the developing countries?

a) Shortage of capital, small markets, inadequate knowledge on profitable lines of production, political instability.
b) Small capital, unskilled labour, high technology, small markets.
c) Unfavourable government policy, small markets, good transport, unskilled labour.
d) Low energy supply, unskilled labour, large markets, poor transport.

36. Study the figure 4 below showing Weber's locational triangle with two sources of raw materials (Rm_1 and Rm_2), a market (m) and production point (P), and answer the question that follows.

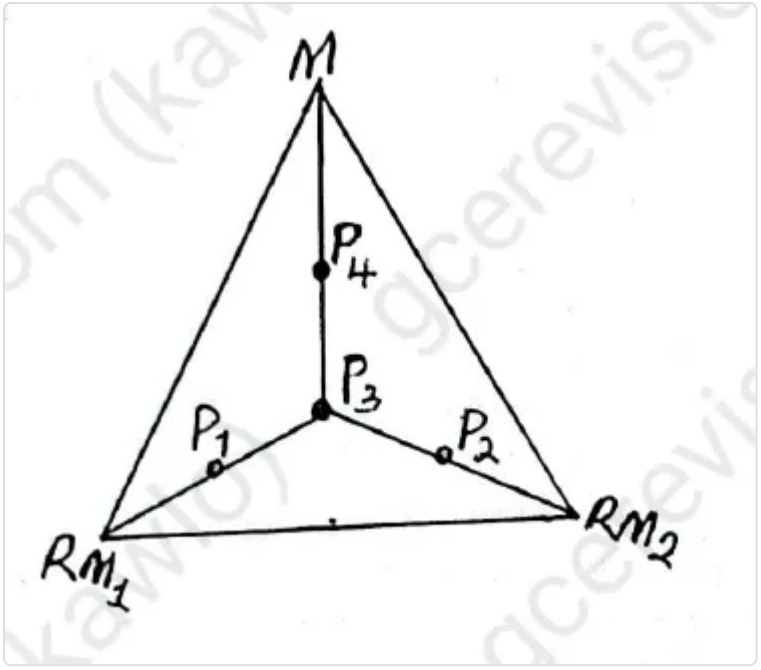

Figure 4: Weber's locational triangle (market M at the top, raw material sources RM_1 and RM_2 at the base, and four possible plant sites P_1, P_2, P_3 and P_4, with P_3 at the centre and P_4 on the line between P_3 and M).

If a manufacturer uses 400,000 tonnes and 350,000 tonnes of raw materials to produce 950,000 tonnes of manufactured products, where would the manufacturing plant be located with regards to Weber's locational triangle above?

a) P_3
b) P_1
c) P_4
d) P_2

37. Table 2 is a presentation of forms of transport and terminal costs.

Table 2: Forms of transport and terminal costs

	Forms of transport	**Terminal costs**
i	Road	Low
ii	Rail	Higher
iii	Air	Very high
iv	Water	Highest

Which of the following is an appropriate description of the relationship in (ii)?

a) The complex terminal facilities and transshipment cost.
b) The simplicity of terminal facilities and the ease of loading and unloading.
c) Poorly developed networks that cause delays
d) High costs of maintenance, depreciation fuel and wages.

38. It is an index which compares the observed or actual number of circuits in a network with the maximum possible number of circuits in the network and usually expressed as a percentage. This can be expressed by the formula: $a = (e - v + 1/2v - 5) \times 100$

This description refers to:

a) Gamma index
b) Cyclomatic number
c) Alpha index
d) Beta index

39. *"Agricultural activities in Cameroon are dominated by subsistence agriculture and employ over 70% of the active peasant population"*. Isolate the characteristics of subsistence agriculture from the following;

a) Use of rudimentary implements, small farm sizes, little use of fertilizers, multiple cropping
b) Mainly for exports, large capital, consolidation, large farm sizes
c) Peasant type, high use of fertilizers, large transportation, large markets
d) Large plots, mechanization, local consumption, large capital

40. The most economical form of transport of heavy bulky goods over long distances is by

a) Rail
b) water
c) Road
d) Air

41. If a rural population in the northern part of Cameroon is seeking a site to settle, which of the following pair of factors would be considered most important?

a) Grazing land and water sources
b) Grazing land and defense
c) Grazing land and building materials.
d) Grazing land and arable land.

42. The Nearest Neighbour Index (Rn) for a rural settlement is calculated and the Rn value is 2.15. What would be the description for this rural settlement pattern?

a) Tendency towards regular
b) Fairly regular
c) Regular
d) Perfectly regular

43. The following are some of the ways that villages adapt to their physical environment: wide verandas, thatch roofs, large windows and short houses. This relates to which of the following areas?

a) Cold dry areas
b) Hot humid areas
c) Hot dry areas
d) Cold wet areas

44. From Figure 5, what relationship exists between population size and number of functions?

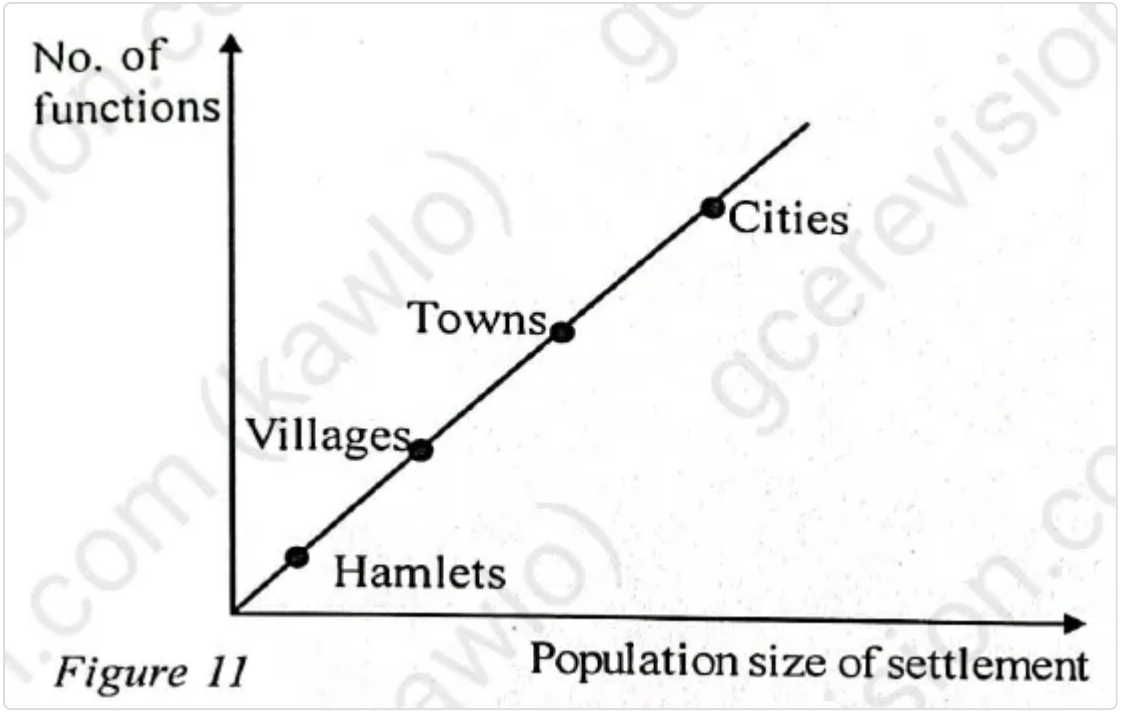

Figure 5: Relationship between population size and number of functions (number of functions against population size of settlement, with hamlets, villages, towns and cities on a rising straight line). Source: Adapted from Guinness et al. (1999). P.75.

a) A high population size of a settlement gives rise to a less number of functions.
b) A low population size of a settlement gives rise to a high number of functions.
c) A high population size of settlement gives rise to a high number of functions.
d) Negative correlation

45. According to the rank size rule, the hierarchy of towns in Cameroon is represented by which of the following patterns?

Options as printed: A) Primary pattern B) Stepped order pattern C) Binary pattern D) Primate pattern

46. Study Figure 6 below showing one of Christaller's hexagonal network.

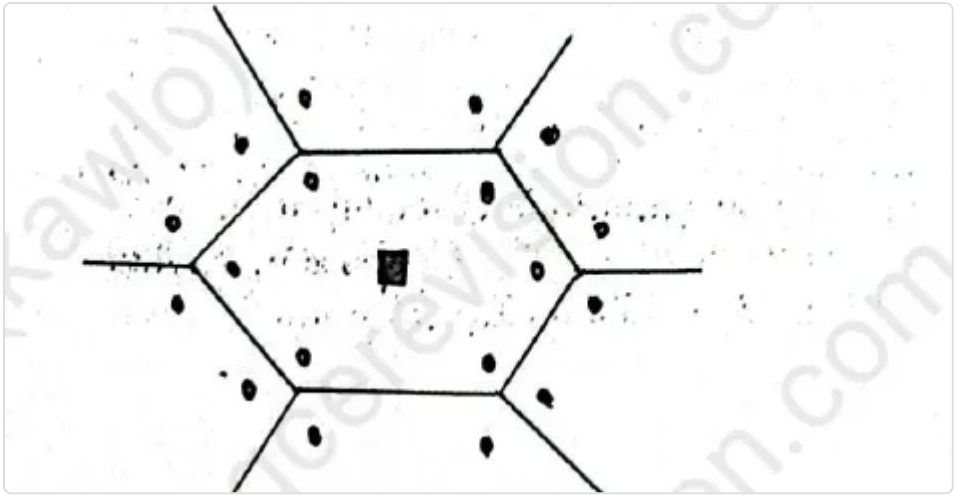

Fig 6: Christaller's hexagonal network (a central place at the centre of a hexagon, with smaller settlements around the hexagon).

The K-value represented by the hexagonal network in the figure above is:

a) K = 13
b) K = 7
c) K = 3
d) K 4

47. The original role of green belts is to:

a) Facilitate urban renewal.
b) Control urban sprawl
c) Provide an improved environment
d) Preserve the architecture of the towns

48. Isolate the major objective of the Millennium Development Goal (MDG)

a) Protection of major water catchment areas
b) Controlling over fishing, especially in open oceans
c) To reduce poverty in developing countries
d) Ensure environmental sustainability

49. Which of the following measures will bring in much revenue to a country as a result of trading with other countries?

Options as printed: A) Quotas B) Exchange Control C) Trade agreement D) Tariffs

50. The main reason why developing countries accept foreign aid is to:

Options as printed: A) increase savings gap B) reduce foreign exchange gap C) reduce export revenue gap D) reduce technical gap
