Biology GCE O Level 2026 - Paper 1

Duration: 1h30 | Cameroon GCE Board

Multiple choice paper (0510 Biology 1, June 2026, Ordinary Level, General Certificate of Education Board). Answer ALL 50 questions; all questions carry equal marks. Each question has four suggested answers A, B, C and D; mark only one answer for each question. Non-programmable calculators are allowed.

Multiple choice questions - choose the best answer, A, B, C or D. Section I (questions 1-7): independent questions. Section II (8-20): biological diagrams. Section III (21-25): one or more of the responses 1, 2 and 3 are correct. Section IV (26-30): two statements to compare. Section V (31-40): choose the heading related to a description. Section VI (41-50): biological situations.

1. The point of attachment of the leaf to the stem is the:

a) Internode.
b) Node.
c) Axil.
d) Apex.

2. The contractile vacuole in Amoeba helps in:

a) Reproduction.
b) Movement.
c) Feeding.
d) Osmoregulation.

3. Choose the correct order of events in the Nitrogen Cycle.

A) Nitrogen in the air -> Animals get nitrogen from plants -> Bacteria fix nitrogen -> Animals die and decompose

B) Animals die and decompose -> Animals get nitrogen from plants -> Nitrogen in the air -> Bacteria fix nitrogen

C) Bacteria fix nitrogen -> Nitrogen in the air -> Animals get nitrogen from plants -> Animals die and decompose

D) Nitrogen in the air -> Bacteria fix nitrogen -> Animals get nitrogen from plants -> Animals die and decompose

a) Nitrogen in the air, animals get nitrogen from plants, bacteria fix nitrogen, animals die and decompose.
b) Animals die and decompose, animals get nitrogen from plants, nitrogen in the air, bacteria fix nitrogen.
c) Bacteria fix nitrogen, nitrogen in the air, animals get nitrogen from plants, animals die and decompose.
d) Nitrogen in the air, bacteria fix nitrogen, animals get nitrogen from plants, animals die and decompose.

4. A solution obtained from crushed germinating bean seeds was tested with Millon's reagent and a red colour was observed. This indicates the presence of:

a) Proteins.
b) Starch.
c) Reducing sugar.
d) Lipids.

5. Which part of the alimentary canal produces bile?

a) Duodenum.
b) Liver.
c) Gall bladder.
d) Stomach.

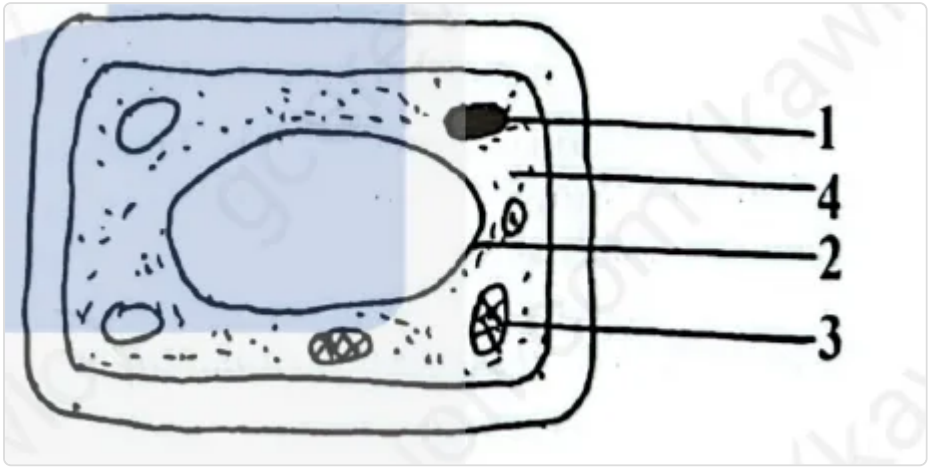

6. Which layer of the skin produces melanin?

a) Cornified layer.
b) Malpighian layer.
c) Granular layer.
d) Subcutaneous layer.

7. What structure protects the lizard's body from mechanical injury?

a) Scales.
b) Tail.
c) Head.
d) Claws.

8. The diagram below is that of a plant cell.

Which of the numbered structures contain chlorophyll?

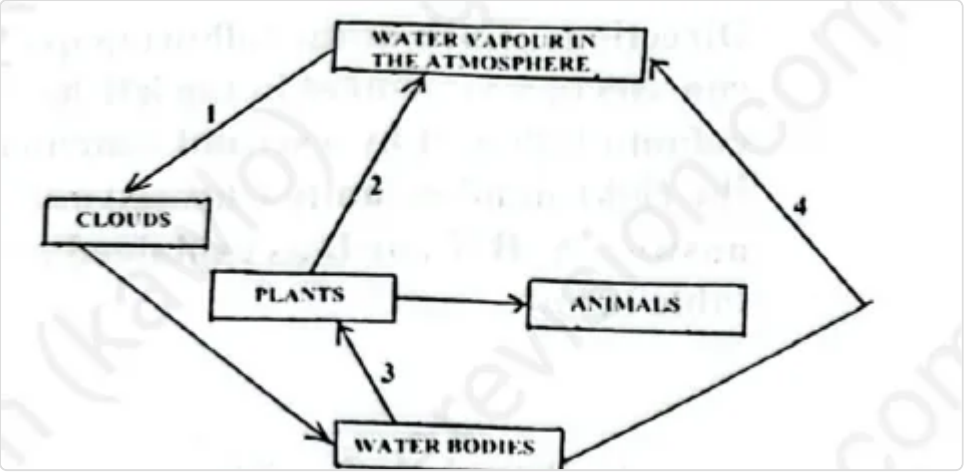

a) 1.
b) 2.
c) 3.
d) 4.

9. The part of the eye responsible for image formation is the:

a) Cornea.
b) Pupil.

c) Retina.
d) Choroid.

10. Below is a presentation of the water cycle.

Which of the following processes is represented by 3?

a) Guttation.
b) Precipitation.
c) Absorption.
d) Evaporation.

11. Which structure prevents the back flow of blood into the right atrium?

a) Semi-lunar valve.
b) Tendon supporting valve.
c) Bicuspid valve.
d) Tricuspid valve.

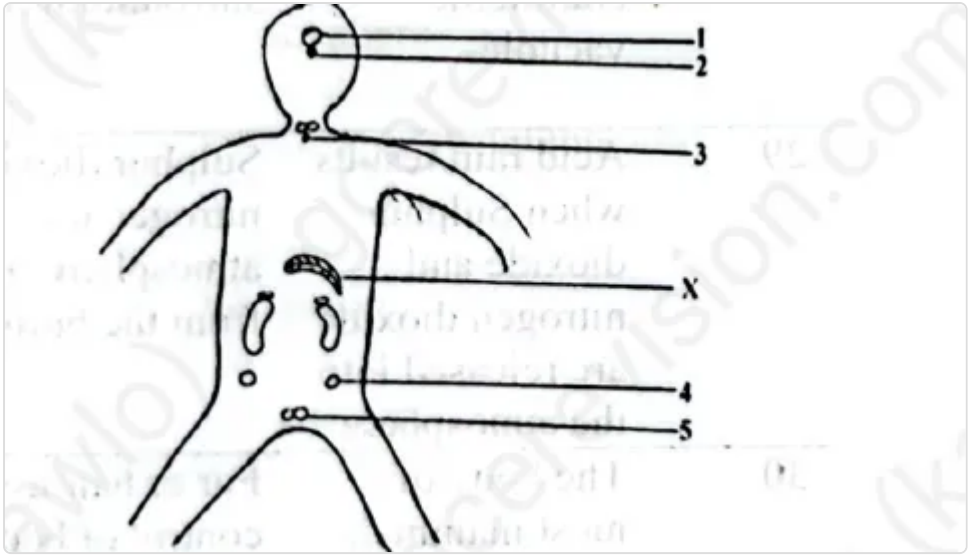

12. This structure is responsible for forward movement in the bony fish.

a) Pectoral fin.
b) Pelvic fin.
c) Dorsal fin.
d) Tail fin.

13. Which part of the female reproductive system is the site for implantation of the embryo?

a) Oviduct.
b) Vagina.
c) Cervix.
d) Uterus.

14. The diagram below shows the position of endocrine glands.

Which of the numbered structure secretes a hormone that controls ovulation in females?

Options as printed: A) 1. B) 4. C) 2. D) 5.

15. It reduces friction during the movement of the elbow joint:

a) Cartilage.
b) Ligaments.
c) Tendons.
d) Humerus.

16. The structure of a nerve cell that conducts impulses away from the cell body:

a) Axon.
b) Dendron.
c) Dendrites.
d) Myelin sheath.

17. The blood vessel most likely to contain food nutrients a few hours after eating a heavy meal;

a) Hepatic portal vein.
b) Hepatic artery.
c) Renal vein.
d) Aorta.

18. The structure in Spirogyra that enables it to carry out autotrophic nutrition:

a) Pyrenoid.
b) Chloroplast.
c) Mucilage.
d) Cytoplasmic strand.

19. Which of the following structure is involved in gaseous exchange in the lungs?

a) Trachea.
b) Bronchus.
c) Bronchiole.
d) Alveolus.

20. From the food chain below, what trophic level is occupied by the goat?

Sun -> maize -> goat -> lion

a) Producer.
b) Decomposer.
c) Primary consumer.
d) Secondary consumer.

21. *Choose:* A) If 1, 2 and 3 are all correct. B) If 1 and 2 only are correct. C) If 2 and 3 only are correct. D) If 1 only is correct.

In a food chain:

1. Producers are autotrophic organisms.
2. Each organism has many food sources.
3. Producers release carbon dioxide during photosynthesis.

a) If 1, 2 and 3 are all correct.
b) If 1 and 2 only are correct.
c) If 2 and 3 only are correct.
d) If 1 only is correct.

22. *Choose:* A) If 1, 2 and 3 are all correct. B) If 1 and 2 only are correct. C) If 2 and 3 only are correct. D) If 1 only is correct.

During the bending movement of the arm:

1. The biceps muscles contract.
2. The triceps muscles relax.
3. The ulna and radius straighten.

a) If 1, 2 and 3 are all correct.
b) If 1 and 2 only are correct.
c) If 2 and 3 only are correct.
d) If 1 only is correct.

23. *Choose:* A) If 1, 2 and 3 are all correct. B) If 1 and 2 only are correct. C) If 2 and 3 only are correct. D) If 1 only is correct.

Myopia (short sightedness):

1. Occurs as a result of the eyeball being large.
2. Near objects are seen clearly.
3. Is corrected with the use of concave lenses.

a) If 1, 2 and 3 are all correct.
b) If 1 and 2 only are correct.
c) If 2 and 3 only are correct.
d) If 1 only is correct.

24. *Choose:* A) If 1, 2 and 3 are all correct. B) If 1 and 2 only are correct. C) If 2 and 3 only are correct. D) If 1 only is correct.

In temperature control during overheating:

1. Sweating is inhibited.
2. Vasodilation occurs.

3. The hair erector muscles relax.

a) If 1, 2 and 3 are all correct.
b) If 1 and 2 only are correct.
c) If 2 and 3 only are correct.
d) If 1 only is correct.

25. *Choose:* A) If 1, 2 and 3 are all correct. B) If 1 and 2 only are correct. C) If 2 and 3 only are correct. D) If 1 only is correct.

Birds fly easily because:

1. They have wings.
2. They have hollow bones.
3. They have streamline bodies.

a) If 1, 2 and 3 are all correct.
b) If 1 and 2 only are correct.
c) If 2 and 3 only are correct.
d) If 1 only is correct.

26. *Choose A, B, C or D as in the table of the paper:* A) first true, second true, 2nd statement is a correct explanation of the first; B) first true, second true, 2nd statement is NOT a correct explanation of the first; C) first true, second false; D) first false, second true.

First statement: During anaerobic respiration glucose is partially broken down.

Second statement: Anaerobic respiration occurs in the cytoplasm.

27. *Choose A, B, C or D:* A) both statements true and the 2nd is a correct explanation of the first; B) both true and the 2nd is NOT a correct explanation of the first; C) first true, second false; D) first false, second true.

First statement: Arteries have small lumen and thick elastic walls.

Second statement: Arteries carry blood away from the heart.

a) First statement true, second statement true, and the second statement is a correct explanation of the first.
b) First statement true, second statement true, and the second statement is NOT a correct explanation of the first.
c) First statement true, second statement false.
d) First statement false, second statement true.

28. *Choose A, B, C or D:* A) both statements true and the 2nd is a correct explanation of the first; B) both true and the 2nd is NOT a correct explanation of the first; C) first true, second false; D) first false, second true.

First statement: Fresh water Amoeba possesses contractile vacuole.

Second statement: The cytoplasm of fresh water Amoeba is more concentrated than the surrounding water.

a) First statement true, second statement true, and the second statement is a correct explanation of the first.
b) First statement true, second statement true, and the second statement is NOT a correct explanation of the first.
c) First statement true, second statement false.
d) First statement false, second statement true.

29. *Choose A, B, C or D as in the table of the paper:* A) first true, second true, 2nd statement is a correct explanation of the first; B) first true, second true, 2nd statement is NOT a correct explanation of the first; C) first true, second false; D) first false,

second true.

First statement: Acid rain results when Sulphur dioxide and nitrogen dioxide are released into the atmosphere.

Second statement: Sulphur dioxide and nitrogen dioxide in the atmosphere originate from the burning of fuel.

30. *Choose A, B, C or D:* A) both statements true and the 2nd is a correct explanation of the first; B) both true and the 2nd is NOT a correct explanation of the first; C) first true, second false; D) first false, second true.

First statement: The body of most mammals is covered with fur or hair.

Second statement: Fur or hair assist in the control of body temperature.

a) First statement true, second statement true, and the second statement is a correct explanation of the first.
b) First statement true, second statement true, and the second statement is NOT a correct explanation of the first.
c) First statement true, second statement false.
d) First statement false, second statement true.

31. Select the heading which is closely related to the description that follows.

Description: The process that releases carbon dioxide into the atmosphere:

a) Photosynthesis.
b) Chemosynthesis.
c) Respiration.
d) Precipitation.

32. Select the heading which is closely related to the description that follows.

Description: Controls balance and posture:

a) Cerebrum.
b) Cerebellum.
c) Hypothalamus.
d) Medulla oblongata

33. Select the heading which is closely related to the description that follows.

Description: A pair of non-identical genes for the same characteristics:

a) Phenotype.
b) Genotype.
c) Homozygous.
d) Heterozygous.

34. Select the heading which is closely related to the description that follows.

Description: An association between two organisms in which both benefit.

a) Parasitism.
b) Saprophytism.
c) Mutualism.
d) Predation.

35. Select the heading which is closely related to the description that follows.

Description: A natural self-sustaining unit.

a) Ecology.
b) Environment.
c) Atmosphere.
d) Ecosystem.

36. Select the heading which is closely related to the description that follows.

Description: Produced during fright.

a) Insulin.
b) Glucagon.
c) Thyroxine.
d) Adrenaline.

37. Select the heading which is closely related to the description that follows.

Description: Causes malaria.

a) Plasmodium.
b) Female anopheles mosquito.
c) Culex.
d) Male anopheles mosquito.

38. Select the heading which is closely related to the description that follows.

Description: Its deficiency will lead to anaemia.

a) Phosphorus.
b) Calcium.
c) Iron.
d) Iodine.

39. Select the heading which is closely related to the description that follows.

Description: Used for tearing of flesh.

a) Incisor.
b) Canine.
c) Premolar.
d) Molar.

40. Select the heading which is closely related to the description that follows.

Description: Is an air pollutant.

a) Lead particles.
b) Nitrogen gas.
c) Mercury.
d) Oxygen.

41. When red blood corpuscles were mounted in distilled water for 20 minutes, only cell fragments remained in solution. This is due to:

a) Wilting.
b) Osmosis.
c) Turgidity.
d) Plasmolysis.

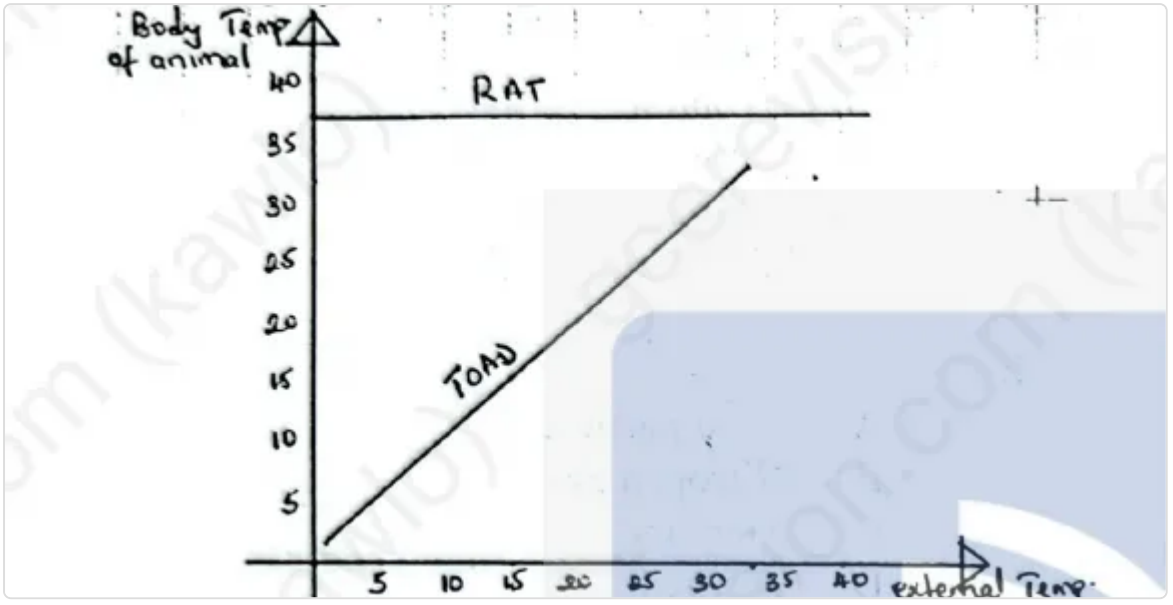

42. In many perennial plants, soluble products of photosynthesis are transported from the leaves to underground storage organs. This is possible through:

a) Root pressure.
b) Transpiration stream.
c) Translocation.
d) Active transport.

43. Two sets of apparatus were used to investigate the process of photosynthesis. Before the set ups were exposed to sunlight, both plants were kept in the dark for 48 hours. What colour change is observed when iodine is used to test for starch in the leaves?

Options as printed: A) Orange. B) Dark blue. C) Deep red. D) Dark green.

44. In an investigation of the effects of external factors on body temperature of various animals, the following results were shown graphically.

From the graph above, the rat is described as:

a) An exothermic animal.
b) An ectothermic animal.
c) A homoiothermic animal.
d) A poikilothermic animal.

45. The table below shows the composition of four different food.

Food	Carbohydrates (g)	Fat (g)	Proteins (g)	Iron (mg)	Calcium (mg)
H	4.8	3.5	2.7	0.01	10.5
P	4.0	5.2	2.5	1.5	0.9

Food	Carbohydrates (g)	Fat (g)	Proteins (g)	Iron (mg)	Calcium (mg)
S	5.0	0.2	1.6	0.25	2.8
R	8.0	0.1	2.4	0.05	0.7

Which food will best prevent anaemia?

a) P
b) S
c) R
d) H

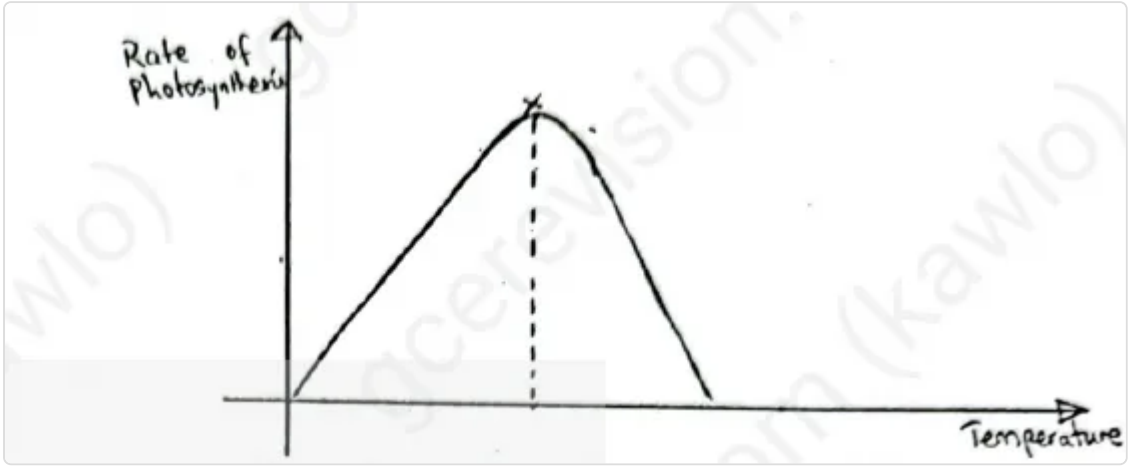

46. In rabbits, albinism (white fur and pink eyes) represented by 'a' is recessive to black fur colour and black eyes represented by 'A'. An albino male is crossed with a pure breeding black female. What is the probability of producing a normal F_2 offspring?

a) $\frac{3}{4}$.
b) $\frac{1}{2}$.
c) $\frac{1}{4}$.
d) 1.

47. A fish suffocates and dies if taken out of water. This is due to the fact that:

a) Gills are airtight.
b) Gills stick to each other.
c) There is little oxygen in the air than water.
d) There is much carbon dioxide in the air than in water.

48. The graph below shows the effect of temperature on the rate of photosynthesis.

What is the significance of point X on the graph?

a) Minimum rate of photosynthesis.
b) Maximum rate of photosynthesis.
c) Reduction in the rate of photosynthesis.
d) Stable rate of photosynthesis.

49.			Donor Blood group			

		A	B	AB	O
	Recipient Blood group	A	✓	X	X	✓
		B	X	✓	X	✓
		AB	✓	✓	✓	✓
		O	X	X	X	✓

From the table above, which Blood group is a universal donor?

a) Blood group A.
b) Blood group B.
c) Blood group AB.
d) Blood group O.

50. The table below shows the predator/prey relationship over a five (5) year period.

Year	**1**	**2**	**3**	**4**	**5**
Predator	3	6	10	5	3
Prey	500	475	300	100	30

Why does the population of predators drop by the fifth year?

a) Competition for space.
b) Too many preys to feed on.
c) Lack of enough prey to feed on.
d) Older predators present.
